Go Live With The JTech Encoder

Do you have a camera with a HDMI output? JTech H.264 is a budget friendly way to get online streaming in just a few minutes. Most setups with the JTech is very simple plug your camera in and give the encoder power. You are on the air broadcasting. This encoder is a small stand-alone box that can be programmed using a local url website. Once programmed you do not have to use a computer to stream with. The only downside is that you would need to use something with a switch to turn on or off. A surge protector or a Smart Plug (Wifi Device that you can remotely turn on/off) For the price this is a solid unit.

Pros

- Low In Price Under \$175
- Solid Metal Unit
- Can stream up to 3 streams

Cons

- Once you give it power its broadcasting – Need to use a switch
- Does not record
- Hardwired Only – No Wifi
